

Whatever your OEM application,

the Garmin GPS 16 and GPS 17 will

Rugged GPS receiver and antenna modules with WAAS

deliver the accuracy you need for

precise position reporting. These GPS

sensors have an integrated antenna

housed in a rugged, waterproof design.

The 12-channel receiver allows for

continuous tracking of all visible satellites.

And it's WAAS capable, which means it

can provide position accuracy of less than

3 meters. This incredible accuracy is

possible without the use of an external

DGPS beacon receiver. The GPS 16 and

GPS 17 also offer excellent EMI/RFI

performance for easy integration into

systems that will be operated near

mobile computing devices and wireless

communications equipment.
