New Julich Supercomputer Center and its 2000 Node Sun Constellation System

Tuesday, June 9th, 2009

One of the First Large QDR-based InfiniBand Supercomputers

The most powerful Sun technology-based computer in Europe is now online. The new Julich Supercomputer Center is supported by 2208 node Sun Constellation System and Sun Blade X6275 server modules. The Sun Constellation Systems operate with Intel Xeon processor 5570 series and communicate with each other via six newly developed "Project M9" InfiniBand switches from Sun that supply quad data rate (QDR) and up to 648 ports while slashing the amount of complex cabling required.

Appeal Virtual Machines

From Wikipedia, the free encyclopedia

Appeal Virtual Machines was a [Swedish](#) company created in 1998 by students from the [Royal Institute of Technology](#) in [Stockholm](#). They were mainly known for their [JRockit Java Virtual Machine](#).^[1]

They were acquired in 2002 by [BEA Systems](#),^[2] who became part of [Oracle Corporation](#) in 2008.

As of 2010, the company founders still worked for Oracle.^[3]

POSC Caesar

From Wikipedia, the free encyclopedia

This article **may contain material not appropriate for an encyclopedia**. Please discuss this issue on the [talk page](#). *(February 2010)*

POSC Caesar Association (PCA) is an international, open, *not-for-profit*, member organization committed to promote the development of open specifications to be used as standards for enabling the interoperability of data, software and related matters.

PCA is the initiator of **ISO 15926** "Integration of life-cycle data for process plants including oil and gas production facilities" and is committed to its maintenance and enhancement.

Nils Sandmark has been the General Manager of POSC Caesar Association since 1999^[1] and Thore Langeland, [Norwegian Oil Industry Association](#) (Norwegian: *Oljeindustriens Landsforening*, OLF), is the Chairman of the Board.

Adoption of Semantics-enabled Applications

- Intelligence, Law Enforcement:
 - Threat analysis, asset tracking, integrated justice
- Integrated Bio-Informatics & Health Care
 - Bio-Pathway analysis, protein interaction
- Health Care Informatics
 - Patient records, reporting, bio-surveillance
- Finance
 - Fraud detection, Compliance Management
- Web and Social Network Solutions
 - Recommender, Social Network Analysis, Activity Analysis
- Media, Games, Content Management
 - Media metadata, content re-purposing
- Many more, actively looking into: Public (all registrars, tax authorities, social offices, reporting/collecting/controlling authorities...), Oil & Gas, ...

Simply Put: Why Semantics?

Issues in Semantic Interoperability

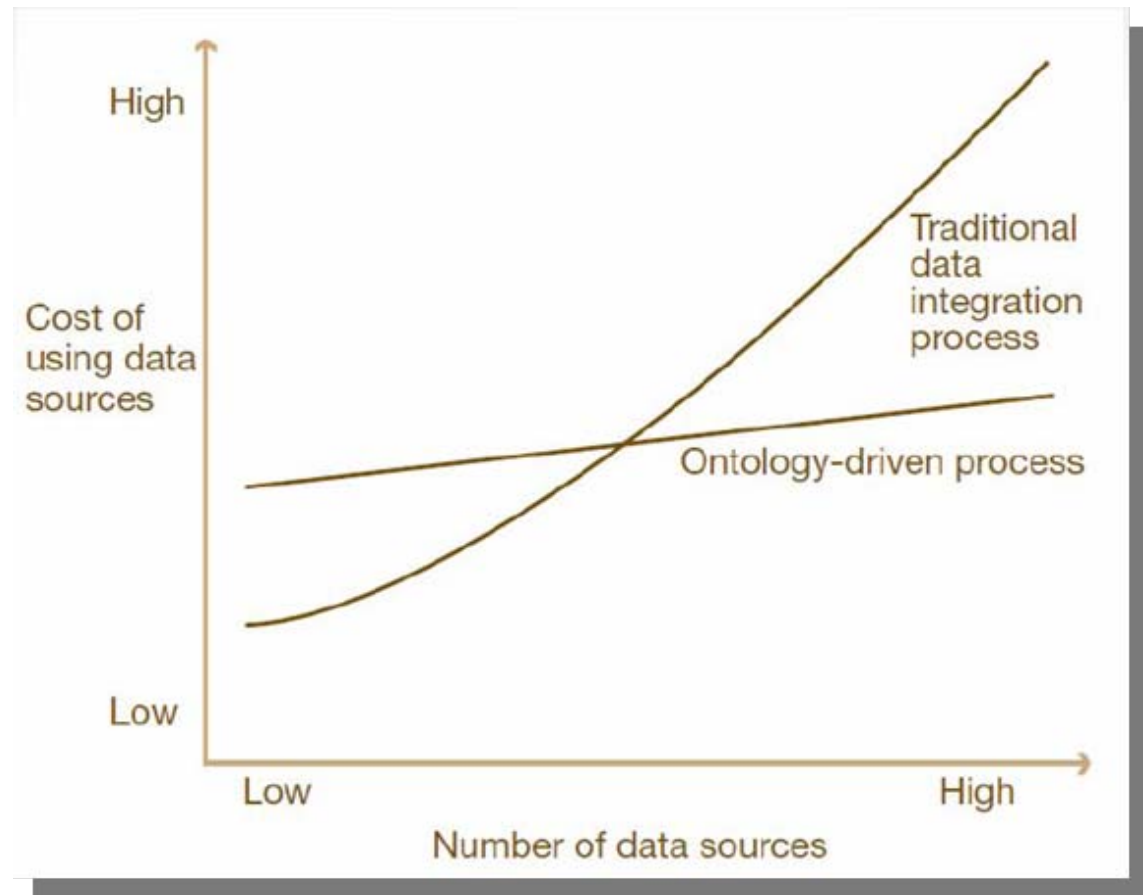

- Data-centric vs. information-centric integration

So how does data become information?

By introducing semantics?

So how do we reduce cost of information (i.e., cost of inter-operability, cost of integration of information)?

By relating information instead of integrating data?

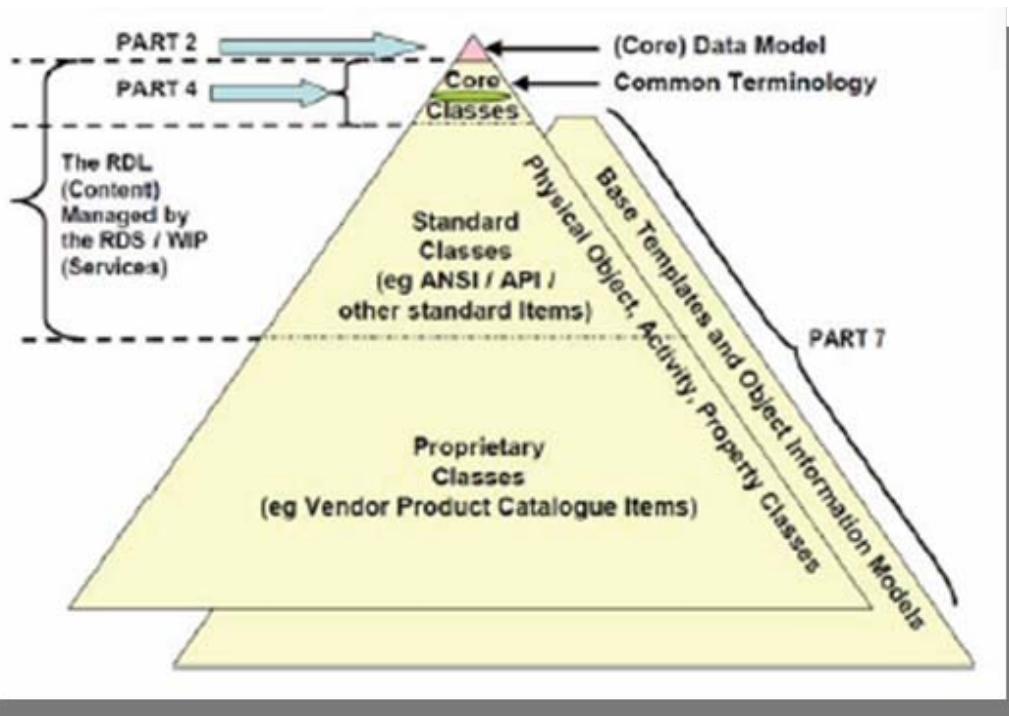

Source: PricewaterhouseCoppers

What's Unique in Oracle's Offerings?

- In addition to being Open, Complete & Integrated, with hardware & software optimized for each other:
 - Only commercial actor with a functioning industry strength triplestore
 - Well integrated traditional & semantic technologies (Semantic DB, RDB)
 - Only vendor who has moved semantics to regular middleware (Canonical Models in Integration, AIA FP), offering true semantic interoperability in its tools
 - Very High performance, true scalability (even in ad-hoc querying, through components like Coherence, industry leadin in-memory object cache), which means that we can in effect provide semantic interoperability and sound integration both wiothin and in between upstream & downstream
